

LOYAL SCAN Table Version

The QIBIXX LOYAL SCAN combines a high-performance 2D scanner and a Bluetooth Low Energy Beacon for a modern supermarket checkout. It allows customers to scan their loyalty cards and vouchers themselves, while the cashier is scanning the products. This makes the transaction easier and faster for both the cashier and the customer. The Loyal Scan scans plastic and paper-cards, as well as smartphone codes. Age verification is possible through OCR scanning of ID cards, driver's licenses and passports.

A Bluetooth 4.0 beacon allows retailers to offer mobile payments and the transmission of customer information through a Bluetooth connection in their mobile app. That opens up new possibilities for marketing and customer service.

Summary

- Self-scan of paper, plastic and smartphone codes
- Voucher and gift card reading
- Secured loyalty cards
- Age verification
- Solid, user-facing design
- Optional payment integration
- Developed in Switzerland, produced in Europe

Specification

- 1D/2D scanner
- Scan resolution: 1280x960
- OCR age and name validation
- LED and sound module for customer feedback
- Bluetooth 4.0 beacon
- USB port for POS
- 4 m USB cable
- Power Supply: USB 5.2V, 2 A
